

**TOOL TIPS FOR URL BYPASS FORM**

If you would like your entire domain to be bypassed (to include sub-domains), please submit it as a wildcard; for example, \*.domain.com\*. If you only want your home/primary landing page bypassed, submit it as "domain.com."

**When entering a URL below, please be aware of the following accepted formats.**

**Valid entry formats examples**

\*.domain.com/\*  
 \*.domain.com\*  
 \*.domain.net  
 domain.com/\*  
 domain.com  
 domain.country extension (i.e. domain.nl)  
 domain.co.nl  
 domain.org  
 domain.info  
 domain.edu  
 domain.biz

**Invalid entry formats examples**

\*domain.com  
 \*domain\*  
 http://www.domain.com (it is unnecessary to include "http://www."  
 www.domain.com (it is unnecessary to include "www."  
 domain.com\*

**Sample treatment of URL treatment on bypass list:**

If a request is entered as domain.com, then only the URL entered will be white listed; however, if the request is entered as \*.domain.com\*, then all URL's that include the domain name and suffixes will be white listed.

**The following entries will not be accepted in this form, as VZW Optimized View already bypasses URL's with these extensions or prefixes. In other words, sites that match these patterns are already bypassed:**

<b>Domain Prefix cannot contain</b>	<b>Domain Suffix cannot contain</b>	<b>Anywhere in URL cannot contain</b>	<b>Page Suffix cannot contain</b>
m.* wap.* avantgo.* wireless.* wapp.* mobile.* iphone.* pda.*	*.mobi	<domain>/m/* <domain>/mobile/* <domain>/portable	*.xhtml *.wml
